

Spell Resistances

Character spells don't have an intrinsic hit%. Instead, they simply check the chance out of 7 that the monster will evade the spell. 0 resistance guarantees a hit, while 7 resistance guarantees a miss.

Fire resistance refers to all attack magic: Firebal, Firebane, Infernos, and Explodet. They all check the same bits for resistance.

As of now, I do not yet know how Sacrifice resistance exactly works. There doesn't appear to be a byte specifically for that resistance. Currently, I believe that Sacrifice will work 100% against all enemies, except Atlas, Bazuzu, Zarlox, Hargon, & Malroth, who is will never work against.
